

Colorado has 58 Named Peaks greater than 14,000 feet above sea level.

Note: The United States Geological Survey (USGS) is responsible for *mapping* and *naming* geographic features in the United States. The National Geodetic Survey (NGS) of the National Oceanic and Atmospheric Agency (NOAA) is responsible for *measuring* geographic features in the United States. This list was compiled by the Colorado Geological Survey during 11/08 using the best, most up-to-date, information from the USGS and NGS. Many of these elevations will not agree with elevations on USGS topo maps because the NGS has recently made corrections based on satellite information regarding the GEOID, that has not been updated on the USGS maps yet. An asterisk (*) denotes the corrected elevations by NGS. There are a few minor peaks >14,000 feet in Colorado that are not named.
