

SECTIONS TO ACCOMPANY SHEET XII.

SECTIONS TO ACCOMPANY SHEET XIII.

SECTIONS TO ACCOMPANY SHEET XVI.

Terminations of Sedimentary Formations are obscure but their character indicates the existence of an ancient shore line.

Dotted lines in the M.C. show the probable continuation of metamorphosed strata. Some of the thinner formations are slightly exaggerated in thickness.

These Sections are continued westward on sheet XVI. Vertical scale 20000 feet to one inch. Horizontal scale 2100 feet to one inch. Base line of sections represents sea level.
